PrePass Update

June 4, 2009

Helping You Stay Competitive in a Tough Economy

During difficult economic times, when everyone is trying to carefully manage costs, PrePass is one of the most affordable options available to help you maintain a competitive edge. That little box on your windshield will help you conserve fuel, limit idle time, reduce vehicle wear from stops and starts at weigh stations, and keep your trucks on the road longer so you can get to your next load faster. Participation in the PrePass program shows customers that you are a carrier committed to safety and on time delivery, which speaks volumes about the quality of your business.

PrePass Plus Now Active in Rhode Island

The Rhode Island Turnpike and Bridge Authority (RITBA) has adopted *E-ZPass* electronic toll collection technology on the Claiborne Pell/Newport Bridge. That means you can now use your PrePass Plus transponders to pay tolls at this location, as well as hundreds of other facilities in the 13 states where *E-ZPass* is operational. For more information about PrePass Plus, including a current coverage map, visit www.PrePass.com/PrePassPlus or call 1-800-773-7277 and select option #3.

Did You Know...?

PrePass has saved the trucking industry more than \$1.9 billion in operational costs and in excess of 135 million gallons of fuel - enough for a truck to make the I-10 trek from Jacksonville to Los Angeles over 340,000 times! PrePass has also saved 28 million hours of valuable driver time and reduced driver turnover. By limiting idle time and both acceleration and deceleration at weigh stations, PrePass customers are also making a contribution to reducing carbon emissions.
